

ABSTRACT

Provided is an apparatus for cleaning eyeglasses that includes a housing, a fluid reservoir, and an evacuation apparatus (such as a pump) for pressurized evacuation of fluid out of the fluid reservoir. Two arms are attached to the housing at their proximal ends and, in their nominal orientations, extend (preferably at an outward angle) from the housing. In a representative embodiment, each arm has a wiping pad at its distal end and is spring-biased into its nominal orientation, such that the wiping pads may be compressed toward each other. Optionally, the fluid reservoir is substantially shape-retaining and is provided with a burstable seal.
